

Grid technology directions

- Convergence on Service Oriented Grids
 - WSRF, WSN, WSDM, Service security, Service directory...
 - Resource abstraction instead of just storage and computing
- Eventually Enabling
 - Seamless and secure end user access to services ("the grid aspect")
 - Global scale service based systems ("the system aspect")
- Research needed on
 - Service discovery, access and security
 - Manageability, adaptability and autonomy of service systems
- IAB expectations
 - Share the different views of the grid future
 - Learn the requirements and expectations of different industries
 - Communicate to the academic world the industrys views
